THE PURPOSE OF CERTIFIED SEED

The purpose of Seed Certification is to maintain and make available to the public sources of high-quality seeds and propagating materials of superior varieties so grown and distributed as to ensure genetic identity.

Varieties eligible for certification have resulted either from natural selection or through systematic plant breeding techniques. In either case, without a planned method for maintaining genetic purity, there is grave danger of losing varietal identity.

Varietal purity is the first consideration in Seed Certification, but other factors such as weeds, diseases, viability, mechanical purity and grading are also important.

Seed Certification is designed to maintain not only the genetic purity of superior crop varieties but also reasonable standards of seed condition and quality.

CERTIFIED SEED

Professionally grown **Certified Seed** typically produces higher yields than farm saved seed, which mean higher net returns for the producer. Purchasing **New Certified Seed** each year will ensure that the producer is getting the highest quality seed available. In addition to being field inspected, conditioned by approved professionals and laboratory tested, the **Certified Seed Label** is proof that the seed has met all of the standards set forth by the South Dakota Crop Improvement Association.

CLASSES OF CERTIFIED SEED

Foundation Seed is the progeny of Breeder or Foundation Seed Stocks produced under control of the originator or sponsoring plant breeding institution, or person, or designee thereof. As applied to certified seed, Foundation seed is a class of certified seed which is produced under procedures established by the certifying agency for the purpose of maintaining genetic purity and identity.

Registered Seed is the progeny of Breeder or Foundation seed handled according to procedures prescribed by the certifying agency so as to maintain satisfactory genetic purity and identity.

Registered-Non Saleable Seed is the progeny of Breeder or Foundation seed handled according to procedures prescribed by the certifying agency so as to maintain satisfactory genetic purity and identity. It may only be sold as certified seed. Registered non-salable seed may be used as the seed stock for certified seed production by the original seed grower only.

Certified Seed is the progeny of Breeder, Foundation, or Registered seed so handled as to maintain satisfactory genetic purity and identity, and which has been approved by the certifying agency.

PLEASE NOTE!

The following list of seed growers includes only those whose fields are planted with Foundation or Registered seed and who have made application for certification and have passed all inspections to date.

Certification can be completed only after the seed from these approved fields has passed all certification tests and standards. **FINAL CERTIFICATION** will depend on a satisfactory laboratory analysis of the conditioned (cleaned) seed lot.

The growers listed will, therefore, only accept tentative orders that will be filled if seed is finally certified, which in fact will be designated by the certification tag or bulk transfer certificate. Seed offered for sale without this documentation **CANNOT** be considered Certified Seed.

The South Dakota Crop Improvement Association and Seed Certification Service are not marketing organizations; hence, inquiries for seed should be made directly to the growers listed.

Neither the South Dakota Crop Improvement Association nor the Certification Service assumes any financial responsibility regarding seed listed, although every attempt has been made to ensure high-quality seed which conforms to the certification standards.

Please report any irregularities.

Pre-Variety Germplasm Certification for Native Grasses and Forbs

This type of certification is available for seeds and other propagating materials of germplasm types that have not been released as varieties.

Protocols include: Site identification; field inspection; and seed sampling and testing.

Three different germplasm types or levels are possible based on the amount of genetic study on the germplasm ascension that has taken place; each type may be marketed as wildland collected seed (Generation 0) or as Generation 1 or later seed from field production:

Source Identified (yellow tag): only the species and original germplasm collection site is known.

Selected (green tag): shows promise of superior and/or identifiable traits as contrasted with other germplasm ascensions, ecotypes, or variety/cultivars of the same species when compared to a common site.

Tested (blue tag): requires progeny testing to prove that superior and/or identifiable traits of interest are heritable in succeeding generations.

Species of Native Grasses and Forbs in Program
None Grown

Quality Assurance Program

South Dakota Crop Improvement Association's (SDCIA) Quality Assurance (QA) program provides a uniform, unbiased quality control system and marketing tool for crop seeds merchandised as varieties, hybrids, brands or blends. While it is designed as a complete quality control system for seed not eligible for certification, its guidelines are very similar to those of the certification program. It is easily customized to meet the needs of the individual seed producer. The QA Program provides significant value for companies and producers who need to adhere to sound quality control programs or meet license agreement protocols in today's era of high value technology and specific genetic traits associated with today's seed products.

The following companies/individuals have produced seed under the SDCIA Quality Assurance Program.
David Leiseth, Hayti.....605-881-2132
Christensen Grain Farm Partnership, Pukwana..... 605-730-2269

Plant Variety Protection

The developer of a new variety may obtain protection for the variety, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety that grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

The export or import of PVP-protected varieties out of the U.S. is not permitted without the variety owner's/developer's permission. Illegal transactions involving PVP-protected varieties may violate federal and state seed laws. In addition, the owner of a protected variety may bring civil action against persons infringing on their rights.

Many of the varieties listed in this publication have either been issued a Certificate of Plant Variety Protection (PVP) or PVP has been applied for. "PVP Title V" specifies seed are sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product. PVP Title V option allows each farmer to set aside enough of their harvest to replant on their own acres for the upcoming cropping season (The owner of the variety may place specific restrictions on sales or use of their variety). They may not provide/sell/barter/exchange seed to another party without the specific permission of the certificate holder.

It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling said variety. It is illegal for anyone to purchase "grain" of a protected variety to use for planting purposes.

Plant Variety Protection (PVP) Violations are Illegal.

- Threatens the integrity of variety and varietal purity.
- Threatens the introduction of noxious or other weeds.
- Threatens other seed producer or retail facility's financial bottom line.

If you know someone who is selling seed illegally, please report it! All leads will be taken seriously and investigated.

You can report anonymously to your state crop improvement or directly to the Farmers Yield Initiative. Simply call or write up your report on plain paper, and mail to:

2026 Varieties With Research Fees

Most varieties have research or production fees on the sales of Registered and Certified classes of seed. These fees are assessed at the point of first sale as a class of certified seed for varieties grown in South Dakota. If the variety in question is not listed please contact the SDCIA office. Phone 605-688-4604.

BARLEY

KODIAK - Kodiak is a spring, 2-row, hulled, hooded, dual purpose barley developed for feed and forage production. It is an F4 derived selection from Lavina by ND24260 cross made in 2015. 'Lavina' (MT981397), on of the top barley forage producers in Montana, is a two-row hooded spring barley and is a cross between 'Haybet' and 'Baronesse'. 'Haybet' (PI 533600) was developed by USDA-ARS and the Montana Experiment Station, while 'Baronesse' (PI 568246) was developed in Germany and both were released in 1989. ND24260 is an experimental line from North Dakota with the stay green phenotype. Kodiak tends to have earlier heading than Haymaker or Lavina, but heading date is similar to MT Cowgirl. Kodiak has similar height to Haymaker and Lavina, but is shorter than MT Cowgirl. Kodiak has higher grain yields compared to MT Cowgirl and Haymaker and equal to Lavina. Plant Variety Protection is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

HRS WHEAT

AP DAGR – AP Dagr is a hard red spring wheat bred and developed by Syngenta Seeds, Inc. in Berthoud, Colorado. It was tested as NP15DC10157605. It is primarily adapted to spring wheat production areas of northeast North Dakota, western Minnesota, and South Dakota. AP Dagr was selected for type, disease reaction, green leaf duration, test weight, yield and quality. AP Dagr has intermediate resistance to Fusarium head blight and foliar diseases. The certified classes of seed shall be Foundation, Registered, and Certified. Plant Variety Protection is anticipated.

AP ELEVATE – AP Elevate is a hard red spring wheat bred and developed by Syngenta Crop Protection AG. It was tested as NP14DD10144609. AP Elevate is primarily adapted to spring wheat production areas of northeast North Dakota, western Minnesota, and South Dakota. It has a juvenile growth habit that is semi-erect. Plant color at boot stage is blue green. Flag leaf at boot stage is erect, twisted and waxy. Head shape is tapering, with mid-dense density and erect curvature. AP Elevate has intermediate resistance to Fusarium head blight and bacterial leaf streak. The certified classes of seed shall be Foundation, Registered, and Certified. AP Elevate is protected under the Plant Variety Protection act with the Title V certification option.

ASCEND-SD – Ascend-SD hard red spring wheat was developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2021. The variety was tested as SD4873 and was developed from the cross of Lang-MN/SD4389. Ascend-SD is a tall semi-dwarf variety, approx-

imately 1" taller than Prevail and has excellent lodging resistance. Ascend-SD has medium-late maturity, one day later than Driver. Ascend-SD has adequate milling and baking characteristics, with average test weight and above average protein content. Ascend SD is protected under the Plant Variety Protection act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

BRAWN-SD - Brawn-SD is a hard red spring wheat (HRSW) cultivar released in 2022 by the South Dakota Agricultural Experiment Station. The variety was tested as SD4843 and was derived from the cross SD4507/SD4416. Brawn-SD is a full-height variety, though it is generally 2 inches shorter than 'Ascend-SD' and possesses good straw strength. Brawn-SD is a medium-maturing variety, one day earlier than Ascend-SD, and similar to 'SY-Valda'. It is moderately resistant to Fusarium head blight, Bacterial Leaf Streak, Leaf rust, and Stem rust. Test weight of Brawn-SD is higher than average and protein concentration is lower than average, however, its milling and baking characteristics are acceptable. Brawn-SD is protected under the Plant Variety Protection act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

ENHANCE-SD - Enhance-SD hard red spring wheat was developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2024. The variety was tested as SD4905 and was developed from the cross of SD4576/Prevail. Enhance-SD is not known to possess dwarfing genes and is similar in height to Prevail with good lodging resistance. Heading date of Enhance-SD is early to medium; one day later than Surpass and 1.5 days earlier than Brawn-SD. Enhance-SD has adequate milling and baking characteristics, with above average test weight and protein content. Plant Variety Protection Act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

LCS BOOM– LCS Boom is a hard red spring wheat was developed by and released by Limagrain Cereal Seeds. The variety was tested as LARR19-0024. LCS Boom was tested and selected in disease nurseries located in Canada, focusing on major diseases such as FHB, stripe rust, leaf rust, stem rust, and common bunt. The variety was extensively evaluated across years and locations for end use quality including traits such as protein content, milling performance, starch quality, gluten strength, and baking performance. LCS Boom is protected under the Plant Variety Protection Act.

MN-TORGY - MN-Torgy hard red spring wheat was developed and released by the University of Minnesota in 2020. The variety, tested as MN14105-7, is a medium maturing, semi-dwarf. The heading date of MN-Torgy is similar to MN-Washburn and Prosper. It is about an inch shorter than Bolles with similar straw strength. The head is tapering, mid-dense and inclined. Glume shoulders are rounded and wide. The head is awned and white at maturity. The seed shape is ovate, with angular cheeks and medium brush length. MN-Torgy has good test weight and excellent protein. The variety is moderately resistant to scab and bacterial leaf streak. It is moderately resistant to prevalent races of leaf rust. MN-Torgy has good baking quality. Released by the Minnesota Agricultural Experiment Station. MN-Torgy is protected under the Plant Variety Protection act with the Title V certification option, a royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

ND ROUGHRIDER - ND Roughrider hard red spring wheat was developed through the North Dakota State University hard red spring wheat breeding program. The maturity of ND Roughrider is well suited to the western Great Plains production region. It has straw strength similar to Faller and has demonstrated a yield advantage over ND Stampede under drought-stressed environments. The variety is medium to tall in height and offers strong standability under a wide range of growing conditions. The variety is similar to ND Stampede for leaf rust resistance and stem rust and exhibits improved resistance to stripe rust. ND Roughrider is moderately resistant to Fusarium head blight (scab) with respect to kernel damage. Plant Variety Protection is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

AP24 AX– AP24 AX is a hard red winter wheat bred and developed by Colorado State University and released in 2022. AP24 AX was tested as CO14A136-135. The variety resulted from the cross AF10/2*Byrd//AF26/Byrd made in 2012. Ownership of AP24 AX has been transferred from CSU to the Colorado Wheat Research Foundation. AP24 AX carries the B-genome and D-genome traits conferring tolerance to the herbicide quizalofop, allowing for control of winter annual grasses including feral rye. Juvenile growth habit is semi-erect. Leaf color at boot stage is green. Flag leaf at boot stage is waxy, erect and not twisted. Anther color is yellow. Head shape is tapering, mid-dense and awned. Glume pubescence is absent. Shoulders are rounded and the beak shape is acuminate. Seed shape is ovate. Seed cheeks are rounded. Certified classes shall be Foundation, Registered and Certified. Syngenta Seeds LLC has been granted rights to maintain purity of the variety and maintain Foundation seedstocks and may utilize Colorado State University's Foundation seed program for manual removal of off-types in maintenance of breeder or foundation seed. Royalties will be collected through the Colorado Wheat Research Foundation. Grain production of AP24 AX may not be saved for replanting under any circumstances. AP24 AX is protected under the Plant Variety Protection Act with the Title V certification option.

MTF1435 – MTF1435 is a tall, medium-late maturing hard red winter wheat cultivar developed for forage and grain production by Montana State University in 2018. MTF1435 is awnless and is targeted as a replacement for Willow Creek. The variety matures 5 days earlier than Willow Creek and has equal or better forage yield and quality. MTF1435 is 4-5" shorter than Willow Creek and has better stripe rust resistance. Winter hardiness is good for MTF1435, and has good standability scores when compared to Willow Creek. The grain had good overall end-use qualities. MTF1435 is proposed for licensed release outside Montana based on improved seed yield in comparison to Willow Creek, at similar forage yield potential. A research fee will be assessed on seed sold. MTF1435 is protected under the Plant Variety Protection Act with the Title V certification option.

SD SUNDOG - SD Sundog is a hard red winter wheat variety developed by the South Dakota Agricultural Experiment Station to be released to South Dakota Certified Seed growers in the fall of 2026. It is an awnless, dual-purpose (grain and forage), medium height variety with good biomass (dry matter/acre) and excellent relative feed value (RFV), thus has good forage yield potential. It also has high grain yield potential with good test weight, excellent grain protein content, and end-use quality. It is SDSU's first dual-purpose wheat variety for haylage (wheatlage) or bread quality grain. SD Sundog is early maturing and moderately resistant (MR-R) to tan spot. Plant Variety Protection act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

SD VIVIAN - SD Vivian is a hard red winter wheat cultivar developed and released in 2025 by the South Dakota Agricultural Experiment Station (SDAES). SD Vivian was derived from a cross SY Wolf/Ruth and is released primarily for its superior adaptation to rainfed wheat production systems in South Dakota. It is semi-dwarf wheat (Rht-B1b, Rht25b) with excellent winter hardiness and medium-late maturity. SD Vivian is a high-yielding line with good test weight. It has excellent grain protein content and can maintain high protein with higher yield. It has a good disease-resistance package and is moderately resistant to stem rust and hessian fly but moderately susceptible to Fusarium head blight, so it is recommended for central and western SD. SD Vivian has good milling characteristics and excellent baking characteristics. Plant Variety Protection Act with Title V certification is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

SY WOLVERINE – SY Wolverine is a hard red winter wheat developed by Syngenta Participations AG and released in 2019. SY Wolverine was tested as 08BC379-40-1. SY Wolverine is a standard height semi dwarf variety that has white chaff at maturity. SY Wolverine is broadly adapted across the winter wheat growing areas of the Western, Northern and Central Plains. SY Wolverine has medium maturity, similar to SY Sunrise. Juvenile growth habit is erect. Leaf color at boot stage is green. Flag leaf at boot stage is non-waxy, twisted and erect. Anther color is yellow. Head shape is tapering, mid dense and awned. Glume pubescence is absent. Shoulders are oblique and the beak shape is acuminate. Seed shape is ovate. Seed cheeks are rounded. SY Wolverine has shown above average leaf rust tolerance according to company data. Syngenta Seeds, LLC maintains seed stock and certified classes of Foundation, Registered and Certified. SY Wolverine is protected under the Plant Variety Protection Act with the Title V certification option.

WINNER - Winner hard red winter wheat was developed by the South Dakota Agricultural Experiment Station (SD AES) and released in 2019 to seed producers by the developing institution. The line was tested as SD14115-5 and was developed from the cross T154/SD07165. Winner is best adapted to central and eastern South Dakota. Winner is a white chaffed, awned, semi-dwarf wheat. The variety has medium height and medium maturity, similar to Lyman. The variety has good winter hardiness and straw strength. Winner is moderately resistant to stem rust and has average tolerance to Fusarium head blight. It shows an intermediate response to stripe and leaf rust. Winner is susceptible to tan spot. The variety has average protein and test weight. The variety has good milling and baking quality. Winner is protected under the Plant Variety Protection act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

OATS

COLT - Colt oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2009. The line was tested as SD020883-29 and resulted from the cross SD97575/ND941119. Colt is an early maturing variety, one day earlier than Don and two days earlier than Reeves. In 2008 SDSU CPT trials, Colt was 3 inches taller than Don and four inches shorter than Reeves. The variety is resistant to smut. Colt is moderately susceptible to red leaf and stem rust. Colt is susceptible to crown rust. Lodging resistance is equal to Jerry, but better than Stallion. Kernels are high in protein and the groat percentage is also high. Colt is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

GOLIATH – Goliath oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2012. The line was tested as SD090552 and was developed from the two parent population IL99-1338/SD97575-38-154. Varieties in the pedigree include Rise, Settler and Troy. Goliath has late maturity, heading 1.7 days later than Stallion. Goliath is 4.3 inches taller than Stallion. Goliath has excellent grain yield and forage yield potential, as well as good test weight. Goliath has a very high groat percentage and average protein content. The variety has excellent resistance to BYDV, stem rust and smut, but is susceptible to crown rust. Goliath has excellent straw strength, but should not be planted on very high fertility soils unless it will be harvested for forage. Goliath is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

HAYDEN – Hayden oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2015. The line was tested as SD111972 and was developed from the three parent population Buckskin//ND011054/SD020835. Hayden is a multi-purpose variety that may be used for forage or grain. Hayden has medium-late maturity, heading about 4 days later than Shelby 427. Hayden is 2 inches taller than Shelby 427 and 4 inches shorter than Goliath. Hayden has excellent yield potential and high test weight. Hayden is resistant to smut and moderately resistant to BYDV. The variety is susceptible to crown rust and moderately susceptible to stem rust. Lodging resistance is better than Goliath and similar to Shelby 427. Hayden is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

JERRY-Jerry oats was developed by the North Dakota Agricultural Experiment Station and released in March of 1994. The line was tested as ND870952. The pedigree of Jerry is Valley/3/RL3038/Kelsey//M22/ Kelsey. Jerry is similar to Newdak in heading date and height and has good lodging resistance. Jerry has white hulls, which are fluorescent under UV light. Kernels have high test weight, groat percent and whole oat protein, but are not as high as Hytest in ND tests. Disease resistance ratings are moderately susceptible for barley yellow dwarf virus (BYDV), smut and stem rust. Jerry is susceptible to crown rust. The variety has medium high protein.

RUSHMORE – Rushmore oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2019. The line was tested as SD140515 with the pedigree of SD080015//SD0070110/SD060130. Rushmore is a multi-purpose variety that may be used for forage or grain. It is a medium-late maturing line, heading about 1 day earlier than Hayden. Rushmore is similar in height to Hayden with better lodging resistance. Rushmore has high yield potential and excellent test weight. The variety is moderately resistant to BYDV and smut but susceptible to crown rust. Rushmore is protected under the Plant Variety Protection Act with the Title V certification option A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

SD MOMENTUM – SD Momentum oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2023. The line was tested as SD170935 and is derived from the cross Hayden/MN11140. SD Momentum is similar to Goliath in maturity, height, test weight and forage dry matter yield with slightly lower forage quality. Compared to Goliath, it is higher in grain yield with better straw strength. SD Momentum is resistant to crown rust and smut along with moderate resistance to barley yellow dwarf virus. Grain characteristics are acceptable for milling with a similar Beta-glucan level as Goliath. Plant Variety Protection Act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

SD RANGER - SD Ranger is a white hulled oat cultivar released by the south Dakota Agricultural Experiment station in 2024. SD Ranger is derived from the cross SD150160/SD150081. Heading for SD Ranger occurs approximately one day later than Rushmore and one day earlier than Hayden. Plant height and lodging resistance are like Hayden. SD Ranger is resistant to smut, moderately resistant to moderately susceptible to crown rust, and moderately tolerant to barley yellow dwarf virus. SD Ranger has excellent yield potential and good test weight. SD Ranger has a high proportion of plump kernels. It is acceptable for milling but it has low beta-glucan concentration. Tall off-types (4-6" taller than the main plant type) appear in SD Ranger at a frequency of 1%. Plant Variety Protection Act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

SD SOLDIER – SD Soldier is a white hulled oat cultivar released by the South Dakota Agricultural Experiment station in 2025. SD Soldier is derived from the cross Natty/MNBT1020-1. MNBT1020-1 is a breeding line developed by Dr. Howard Rines at the USDA-ARS Cereal Disease Laboratory in Saint-Paul, MN. Dr. Rines introgressed a new crown rust resistance gene from the diploid oat Avena strigosa into hexaploid oat Avena sativa. This source of adult plant resistance is highly effective against the crown rust races currently prevalent in the Northern Great Plains, providing SD Solider with excellent crown rust resistance. Heading for SD Soldier occurs approximately one day after Shelby 427. SD Soldier has high yield potential and excellent test weight. Plants of SD Soldier are tall. Lodging resistance is average. Thousand kernel weight is average. The percentage of plump kernel is lower than average. Plant Variety Protection Act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

SD TITAN – SD Titan oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2023. The line was tested as SD181245 and is derived from the cross MN11140/SD120638. SD Titan is one day earlier than Goliath in maturity, one inch shorter in height, and has a lower-than-average test weight. SD Titan is higher in grain yield and forage dry matter yield than Goliath. It is moderately resistant to crown rust, smut and barley yellow dwarf virus. Grain characteristics are not acceptable for milling but is an excellent choice for oat forage. Plant Variety Protection Act with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

SHELBY 427 – Shelby 427 oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2010. The line was tested as SD031128-330 and resulted from the cross SD99674/ND960851. Shelby 427 is an early maturing variety, one-two days earlier than Colt. In 2009 SDSU CPT trials, Shelby 427 was 4 inches taller than Colt and equal in height to Jerry. When compared to other early varieties, Shelby 427 has superior grain yield and test weight. Shelby 427 is susceptible to crown rust. The variety is moderately resistant to smut, and is moderately susceptible to stem rust and BYDV. Lodging resistance is better than Jerry and Colt. Kernels have a high groat percentage. Shelby 427 is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Certified seed. There will be no saleable registered class of seed.

TRITICALE

841446398 (Brand Name: FLEX 719) - Flex 719 is a mid-tall, awnletted, winter triticale developed by Northern Agri-Brands LLC. The line was tested as RSI 204719. 841446398 was released in 2017. Plant color at boot stage is blue-green. The flag leaf is not twisted, erect and waxy. Spikelets are yellow in color when mature, dense with oblong shape. Seed is elliptical, slightly wrinkled, amber colored with mid-long brush length. The variety has excellent lodging resistance. Foundation, Registered and Certified classes are recognized beyond Breeder seed which is maintained by Northern Agri-Brands LLC. The variety is sold under the Brand Flex 719. The variety is protected under the Plant Variety Protection Act.

FX1001 - FX1001 winter triticale was developed for forage production and is marketed by the Montech Seed Group under the FORAGE FX1001 brand. The variety is a tall, nearly awnless winter triticale that was bred for strong winter hardiness, high forage production, and broad adaptation across the Northern Plains and Inter-mountain West. FX1001 is earlier maturing and taller than many traditional winter cereal forage standards. The variety typically heads several days earlier than other forage triticales and has demonstrated excellent adaptation in both dryland and irrigated production systems. The variety is nearly awnless, with approximately 97% of plants expressing no awns and the remaining plants expressing only short awnlets. FX1001 produces a tall, leafy canopy and is well suited for silage, hay, grazing, and other forage uses. Foundation, Registered, and Certified seed classes are recognized beyond Breeder seed. Plant Variety Protection Act is anticipated

CHICKPEAS

ND CROWN - ND Crown was released in 2020 by the NDSU pulse crops breeding and genetics program. It is a high-yielding kabuli chickpea that consistently produces large seed, is resistant to lodging with great standability, and comparable maturity to commercial cultivars like CDC Frontier and CDC Orion. In addition, ND Crown exhibits moderate resistance to Ascochyta blight, and shines under high disease pressure, displaying significantly lower Ascochyta blight severity than CDC Frontier and CDC Orion. ND Crown is protected under the Plant Variety Protection act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

WEIGHTS AND MEASURES

Linear Measure (Length)
1 Mile = 5,280 feet or 320 rods
1 Rod = 16½ feet

Square Measure (Area)
1 Acre = 160 square rods or 43,560 square feet
1 Square Rod = 30¼ sq. yds.
1 Square Yard = 9 sq. feet

Weight
1 Pound = 16 ounces
1 Long Ton = 2,240 pounds (Great Britian)
1 Short Ton = 2,000 pounds (USA)

Cubic Measure (Area)
1 Cubic Yard = 27 cubic feet
1 Cubic Foot = 1,728 cubic inches

TEMPERATURE CONVERSIONS

To convert Centigrade to Fahrenheit:

$$\frac{°C \times 9}{5} + 32 = °F$$

To convert Fahrenheit to Centigrade:

$$\frac{(°F - 32) \times 5}{9} = °C$$

DETERMINING PLANT POPULATION

Row length to equal 1/1000th acre

Row Width in inches	Row width 1/1000th acre
7″	74′8″
10″	52′3″
14″	37′4″
15″	34′10″
20″	26′2″
24″	21′9″
28″	18′8″
30″	17′5″
32″	16′4″
36″	14′6″
38″	13′9″
40″	13′1″

Metric Equivalents (Linear Measure)
1 Mile = 1.6093 kilometers
1 Kilometer = 0.62137 mile
1 Rod = 0.5029 decameter
1 Decameter = 1.9884 rods
1 Meter = 39.37 inches or 1.0936 yds.

Meter Equivalents (Square Measure)
1 Acre = 0.04047 hectare
1 Hectare = 2.471 acres
1 Square Rod = 0.2529 acre
1 Acre = 8.594 square rods
1 Square Yard = 0.8361 square meter

Metric Equivalents (Volume)
1 Bushel = 0.3524 hectoliter
1 Hectoliter = 2.8375 bushels
1 Quart dry = 1.101 liters
1 Quart liquid = 0.9463 liters
1 liter = 0.908 quart dry
1 liter = 1.0567 quarts liquid

Metric Equivalents (Weight)
1 Pound = 0.4536 kilogram
1 Kilogram = 2.2046 pounds
1 Metric Ton = 2,204.6 pounds

Volume Conversion Factors/ Area Conversion Factors
Cubic ft. × 0.8 = bushels grain
Cubic ft. × 7.48 = gallons
Cubic ft. × 62.4 = pounds water
Gallons × 8.330 = pounds water
Gallons × 0.1337 = cubic ft.
Cubic inches ÷ 1,728 = cubic ft.
Cubic yard × 27 = cubic ft.
Cubic ft. ÷ 27 = cubic yards

GROWING DEGREE DAY EQUATION

$$GDD = \frac{\text{Daily Max. Temp.}^{*} + \text{Daily Min. Temp.}^{\dagger} - 50°}{2}$$

*: Up to a maximum of 86°F
†: Not below 50°F
