THE PURPOSE OF SEED CERTIFICATION

The purpose of Seed Certification is to maintain and make available to the public sources of high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic identity.

Varieties eligible for certification have resulted either from natural selection or through systematic plant breeding techniques. In either case, without a planned method for maintaining genetic purity, there is grave danger of losing varietal identity.

Varietal purity is the first consideration in Seed Certification, but other factors such as weeds, diseases, viability, mechanical purity and grading are also important.

Seed Certification is designed to maintain not only the genetic purity of superior crop varieties but also reasonable standards of seed condition and quality.

Classes of Certified Seed

Foundation seed is the progeny of Breeder or Foundation Seed Stocks produced under control of the originator or sponsoring plant breeding institution, or person, or designee thereof. As applied to certified seed, Foundation seed is a class of certified seed which is produced under procedures established by the certifying agency for the purpose of maintaining genetic purity and identity.

Registered seed is the progeny of Breeder or Foundation seed handled according to procedures prescribed by the certifying agency so as to maintain satisfactory genetic purity and identity.

Certified seed is the progeny of Breeder, Foundation, or Registered seed so handled as to maintain satisfactory genetic purity and identity and which has been approved by the certifying agency.

PLEASE NOTE

The following list of seed growers includes only those whose fields are planted with Foundation or Registered seed and who have made application for certification and have passed all inspections to date.

Certification can be completed only after the seed from these approved fields has passed all certification tests and standards. **FINAL CERTIFICATION** will depend on a satisfactory laboratory analysis of the conditioned (cleaned) seed lot.

The growers listed will, therefore, only accept tentative orders that will be filled if seed is finally certified, which in fact will be designated by the certification tag or bulk transfer certificate. Seed offered for sale without this documentation **CANNOT** be considered Certified Seed.

The South Dakota Crop Improvement Association and Seed Certification Service are not marketing organizations; hence, inquiries for seed should be made directly to the growers listed.

Neither the South Dakota Crop Improvement Association nor the Certification Service assumes any financial responsibility regarding seed listed, although every attempt has been made to insure high quality seed which conforms to the certification standards.

Please report any irregularities.

CERTIFIED SEED

Professionally grown CertiÀed Seed typically produces higher yields than farmer-saved seed, which means higher net returns for the producer. Purchasing New CertiÀed Seed each year will ensure that the producer is getting the highest quality seed available. In addition to being Àeld inspected, conditioned by approved professionals, and laboratory tested, the CertiÀed Seed Label is proof that the seed has met all of the standards set forth by the South Dakota Crop Improvement Association.

ORDER YOUR NEW CERTIFIED SEED TODAY!

Quality Assurance Program

South Dakota Crop Improvement Association's (SDCIA) Quality Assurance (QA) program provides a uniform, unbiased quality control system and marketing tool for crop seeds merchandised as varieties, hybrids, brands or blends. While it is designed as a complete quality control system for seed not eligible for certiÀcation, its quidelines are very similar to those of the certiÀcation program. It is easily customized to meet the needs of the individual seed producer. The QA Program provides signiÀcant value for companies and producers who need to adhere to sound quality control programs or meet license agreement protocols in today's era of high value technology and speciÀc genetic traits associated with today's seed products.

The following companies/individuals have produced seed under the SDCIA Quality Assurance Program.

Ag Performance, Inc., Buffalo Center, IA . . . 641-562-2370 Hansmeier & Son, Inc., Bristol SD. 605-492-3611 Moeckly Seed (REA Hybrids), Britton SD . . 605-448-2212

BARLEY

ND-GENESIS—ND Genesis barley was developed and released by North Dakota State University Research Foundation in 2015. ND Genesis, tested as 2ND25276, is a two-rowed barley. ND Genesis has semi-smooth awns. Kernels have a white aleurone with long hairs on the rachilla. Heading date of ND Genesis is the same as Pinnacle. ND Genesis is approximately 1 inch shorter than Pinnacle. ND Genesis is moderately resistant to spot blotch and net blotch. It accumulates less DON than Pinnacle. ND Genesis is undergoing tests for malting quality by the AMBA. ND Genesis is protected under the U.S. Plant Variety Protection Act with the Title V certification option.

CHICKPEAS

CDC FRONTIER—CDC Frontier chickpeas were developed by Saskatchewan Pulse Growers. CDC Frontier is a large Kabuli type chickpea (garbanzo) cultivar. This cultivar has fair resistance to Ascochyta blight and excellent seed quality traits. Plants of CDC Frontier are about equal in height to Dwelley. CDC Frontier flowers 2 days earlier than Dwelley. CDC Frontier has a fern leaf type. This means the leaves have from 9-15 leaflets. The seeds are large, deeply wrinkled and cream colored. CDC Frontier is protected under the Plant Variety Protection Act.

CDC ORION—CDC Orion chickpeas were developed by Saskatchewan Pulse Growers and released in 2010. CDC Orion is a large Kabuli type chickpea (garbanzo) cultivar. This cultivar has fair resistance to Ascochyta blight and excellent seed quality traits. Plants of CDC Orion are about equal in height to Amit and CDC Frontier. CDC Orion flowers 3 days earlier than Amit. The flowers of this variety are white. CDC Orion has a fern leaf type, similar to CDC Frontier and Amit. This means the leaves have from 9-15 leaflets. The seeds are large, deeply wrinkled and beige/cream colored, similar to CDC Frontier, but slightly bigger.

FIELD PEAS

AAC CARVER— AAC Carver field pea was developed by Agriculture and Agri-Food Canada. The variety was released in 2015 and is distributed by Canterra Seeds. AAC Carver field pea is a medium maturing pea. The variety is semi-leafless and has white flowers. The seeds are yellow in color and are medium in size, similar to DS Admiral. Vine length is longer when compared to Agassiz.

AGASSIZ—Agassiz field pea is a medium maturing pea, 2 days earlier than CDC Mozart. The variety is semi-leafless, the seeds are yellow in color and are medium in size, similar to DS Admiral. Vine length is also similar to DS Admiral. Agassiz is resistant to powdery mildew, moderately susceptible to Fusarium wilt and susceptible to Mycosphaerella. Agassiz is marketed by Meridian Seeds, LLC.

Walworth	Leo Vojta, Glenham	(605)848-3709	. С	155
			TOTAL	155

CDC AMARILLO—CDC Amarillo field pea is a semi-leafless variety released in 2016 and distributed by Saskatchewan Pulse Growers. CDC Amarillo is a yellow pea that is medium maturing. It is about the same height as Salamanca. CDC Amarillo has very good resistance to powdery mildew and fair resistance to Fusarium wilt. It has very good lodging resistance. Application has been made for Plant Variety Protection.

County	Name, Address Te	elephone	Class	Acres

DS ADMIRAL—DS Admiral field pea originated from the cross Renata// Bohatyr/M420062 made in 1988 in Holeby, Denmark. The variety is maintained by Agriprogress Inc., in Morden, Manitoba. Danisco Seed is the PVP Applicant. DS Admiral is a semi-leafless variety. The seeds are yellow in color and are medium to large in size when dried. DS Admiral has white flowers that number two per node. The pods are green and are pointed on the distal end. DS Admiral matures mid-season. The variety is moderately susceptible to root rot and Mycosphaerella blight, but is resistant to powdery mildew. DS Admiral is protected under the Plant Variety Protection Act with Title V certification option.

LENTILS

CDC IMVINCIBLE CL—CDC Imvincible CL is a yellow cotyledon lentil line suited to the small green market class. It was developed at the Crop Development Centre, University of Saskatchewan and was released in 2017. This product is offered by Pulse USA. Resistance to both Ascochyta and Anthracnose are good. It was developed with the Clearfield herbicide resistance for control of annual grasses. CDC Imvincible CL is a tall early maturity variety, maturing three days earlier than CDC Maxim CL. Application for Plant Variety Protection with the Title V certification option has been made.

MILLET

HORIZON—Horizon millet is a white-seeded proso variety developed by the Nebraska Agricultural Experiment Station and co-released with the University of Wyoming, South Dakota State University, Colorado State University and the USDA-ARS. The line was tested as NE-9217. Sunup, Rise, Dawn and Cope are part of the pedigree of Horizon. The variety has a compactum (closed) type panicle and the foliage is green, similar to Sunup. Horizon is earlier in maturity than Sunrise and Earlybird, and about a week later than Dawn. Seed size of Horizon is similar to Sunrise and Earlybird, and larger than Huntsman. Horizon is shorter than Earlybird, Sunrise, Sunup and Huntsman, but taller than Dawn. Straw strength is similar to Sunup. Horizon has shown no susceptibility to Russian wheat aphid.

SAFFLOWER

FINCH—Finch safflower was developed by the Montana Agricultural Experiment Station and cooperatively released with the North Dakota Agricultural Experiment Station and USDA-ARS in 1986. Tested as 81B3565, Finch is similar to S-208 in flowering and maturity. The flower is yellow in the bud and full bloom stages. Height of Finch averages about 51.3 cm under dryland conditions. The seeds are predominately white with a high test weight. Finch has more disease resistance to Alternaria leaf spot and Pseudomonas bacterial blight than S-208. Finch was released as a normal hull cultivar for the birdseed market and recommended for dryland production.

BIG BLUESTEM

BONILLA—Bonilla big bluestem is a native perennial warm season grass capable of producing a sod from short rhizomes. Bonilla originated from native stands collected in 1961 north of Bonilla located in NW Beadle County, SD. The seed collected was used to establish an increase field at the USDA/NRCS Plant Materials Center at Bismarck, ND. The variety was released in 1988. Plants are tall, ranging from 31/2 to 61/2 feet in height. Big bluestem is best suited to subirrigated lowlands on level to gently undulating glacial till plains; overflow sites, level swales and depressions, and bottomlands along rivers and streams. Species of big bluestem have a very wide area of adaptation throughout the U.S. and Canada. Bonilla is 25 days later in maturity than northern source NDG-4 and is 23 days earlier than Sunnyview. 'Champ', 'Pawnee' and 'Kaw' do not consistently produce mature seed in northern latitudes. Varieties need to be selected for the latitude they are to be grown in.

SIDEOATS GRAMA

PIERRE—Pierre sideoats grama was selected and released at the Soil Conservation Service (NRCS) Plant Materials Center, Bismarck, ND. A composite of seed was collected from several plants found in a native range west of Pierre, SD. These plants were selected for their outstanding vigor and leafiness. The line was tested as PM-SD-251 against many other field collections and was released as a variety in 1964. Pierre shows good disease resistance and seedling vigor. It is adapted to western South Dakota and adjoining areas of bordering states.

				TOTAL	50

SUNBURST—Sunburst switchgrass was developed by the South Dakota Agricultural Experiment Station and was released in 1983. Sunburst was tested as SD-32 and is a composite of open-pollinated seed from 800 plants, representing 10 outstanding families selected from southeastern South Dakota ecotypes. The variety was especially selected for its large seed size. Sunburst is a vigorous, winter hardy, medium tall, medium maturity, leafy, upland type. Sunburst has exhibited significantly greater percent emergence and seedling vigor than both Summer and Nebraska 28. This increased seedling vigor is due to its large seed size. Chances for increased stand establishment can be expected. Sunburst matures earlier than Summer and later than Nebraska 28.

OATS

COLT—Colt oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2009. The line was tested as SD020883-29 and resulted from the cross SD97575/ND941119. Colt is an early maturing variety, one day earlier than Don and two days earlier than Reeves. In 2008 SDSU CPT trials, Colt was 3 inches taller than Don and four inches shorter than Reeves. The variety is resistant to smut. Colt is moderately susceptible to red leaf and stem rust. Colt is susceptible to crown rust. Lodging resistance is equal to Jerry, but better than Stallion. Kernels are high in protein and the groat percentage is also high. Colt is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

GOLIATH—Goliath oat is a white-hulled, spring oat developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2012. The line was tested as SD090552 and was developed from the two parent population IL99-1338/SD97575-38-154. Varieties in the pedigree include Rise, Settler and Troy. Goliath has late maturity, heading 1.7 days later than Stallion. Goliath is 4.3 inches taller than Stallion. Goliath has excellent grain yield and forage yield potential, as well as good test weight. Goliath has a very high groat percentage and average protein content. The variety has excellent resistance to BYDV, stem rust and smut, but is moderately susceptible to crown rust. Goliath has excellent straw strength, but should not be planted on very high fertility soils unless it will be harvested for forage. Goliath is protected under the Plant Variety Protection Act with the Title V certification option. Goliath will not have a saleable registered class. A royalty fee will be collected on all sales of the Certified class for seed purposes.

TRITICALE

718 — 718 is a mid-tall, awnletted, winter triticale developed by Dr. George Fohner who is a plant breeder with Resource Seeds, Inc. The line was tested as 202718, and resulted from the cross 336//Presto/Lasko. Awnletted spikes were selected from the F4 population, and then 100 awnletted spikes were selected and bulked from the resulting F5 population to constitute breeder seed. 718 was released in 2009. Plant color at boot stage is green. The stem is very hairy. The flag leaf is twisted. Spikelets are tan in color when mature, dense with fusiform shape. Seed is elliptical, slightly wrinkled, amber colored with mid-long brush length. 718 is tolerant to stripe rust and BYDV. The variety has good lodging resistance and winter hardiness. Foundation, Registered and Certified classes are recognized beyond Breeder seed which is maintained by Resource Seeds, Inc. The variety is protected under the Plant Variety Protection Act.

DURUM WHEAT

JOPPA—Joppa durum was developed by the North Dakota State University Agricultural Experiment Station and released in 2013. Joppa, tested as D04581, was selected from the cross Maier/D97643 made in 2000. Joppa is similar to Carpio in height. The variety has stiff straw and is day length sensitive. The maturity of Joppa is 2 days later than Divide and similar to Tioga. The spikes are mid-dense, awned, oblong and erect. Joppa is resistant to stem rust and leaf rust.

HARD RED SPRING WHEAT

ADVANCE—Advance hard red spring wheat was developed by the South Dakota Agricultural Experiment Station (SDAES) and released in 2011. The variety was tested as SD4023 and was developed from the population Granger/N98-0230. Advance is a semi-dwarf variety, approximately one inch shorter in height than Knudson. Advance is a later maturing variety, approximately a half day later than Steele-ND. The variety is moderately resistant to stem rust, stripe rust and scab. Advance is moderately susceptible to leaf rust. Advance has adequate

milling and baking characteristics, with good test weight and average protein. Advance is protected under the U.S. Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

AMBUSH—Ambush is a hard red spring wheat bred and developed by Syngenta Seeds, Inc. - AgriPro of Berthoud, Colorado and released in 2016. The variety was tested as 05S0157-4. It is a standard semi-dwarf variety, similar to SY Ingmar in height. Ambush is resistant to stem rust and moderately resistant to leaf rust. Ambush is moderately susceptible to Fusarium head blight. The variety has a juvenile growth habit that is erect. Plant color at boot stage is green. Flag leaf at boot stage is erect and twisted. Head shape is tapering and awned. Test weight and protein are above average, with acceptable baking qualities. Dyna Gro has been given exclusive marketing rights to this variety.

LANG-MN-Lang-MN hard red spring wheat was developed and released by the University of Minnesota in 2017. The variety, tested as MN10261-1, was derived from the cross of Glenn/Sabin. Lang-MN was named after Ben Lang, a long time (35 years) field inspector and past CEO of MCIA. The heading date of Lang-MN is equal to Boost and Faller. It is average height, equal to Faller and Prevail. The head is tapering, mid-dense and inclined. Glume shoulders are oblique and are medium in width. The head is awned and white at maturity. The seed shape is ovate, with angular cheeks and medium brush length. It has above average test weight and is equal to Boost in protein content. Lang-MN has tolerance to Fusarium head blight and Bacterial Leaf Streak. It has resistance to the prevalent races of leaf rust and stripe rust. Released by the Minnesota Agricultural Experiment Station, a research fee will be assessed on seed sold of Lang-MN. Application for Plant Variety Protection with Title V is anticipated. LCS ANCHOR—LCS Anchor hard red spring wheat was developed by and released by Limagrain Cereal Seeds in 2016. The variety was tested as LNR12-0283. LCS Anchor is an awned variety, with early maturity. It is a short, semi-dwarf variety. The flag leaf at boot stage is

recurved, not twisted, without wax. The spike shape is oblong, with lax density. The head is erect and white in color at maturity. LCS Anchor has tolerance to bacterial leaf streak, but is moderately susceptible to scab. The variety is moderately resistant to stripe and leaf rust, according to company data. LCS Anchor has average protein and good test weight. The variety has acceptable bread making quality. The certified classes of seed shall be Foundation, Registered and Certified. LCS Anchor is protected under the Plant Variety Protection Act.

SY INGMAR—SY Ingmar is a hard red spring wheat bred and developed by Syngenta Seeds, Inc. - AgriPro of Berthoud, Colorado and released in 2014. The variety was tested as 04S0258-12. It is a standard semi-dwarf variety. Straw strength is very good. SY Ingmar is resistant to stem rust, and moderately resistant to leaf rust and scab. The variety has a juvenile growth habit that is erect. Plant color at boot stage is green. Flag leaf at boot stage is recurved and twisted. Head shape is mid-dense, tapering and inclined. Overall bread making characteristics are very good. SY Ingmar is protected under the Plant Variety Protection Act with the Title V certification option.

SY ROWYN—SY Rowyn is a hard red spring wheat bred and developed by Syngenta Seeds, Inc. - AgriPro of Berthoud, Colorado and released in 2013. The variety, tested as 03S0253-7, has medium-early maturity and very good test weight. It is a standard semi-dwarf, slightly taller than Kelby. Straw strength is very good, between Kelby and SY Soren. SY Rowyn is moderately susceptible to stripe rust and leaf rust and resistant to stem rust. Protection to foliar diseases has been good. Tolerance to FHB has been intermediate. The variety has a juvenile growth habit that is erect. Plant color at boot stage is light green. Flag leaf at boot stage is recurved and twisted. Head shape is tapering and awned. Protein levels have been medium-low, slightly higher than Faller. Overall bread making characteristics are very good. SY Rowyn is protected under the Plant Variety Protection Act with the Title V certification option.

SY RUSTLER—SY Rustler is a hard red spring wheat bred and developed by Syngenta Seeds, Inc. - AgriPro of Berthoud, Colorado and released in 2016. The variety was tested as 05S0242-6. It is a short semi-dwarf variety, similar to SY Rowyn in height. SY Rustler is moderately resistant to leaf and stripe rust. SY Rustler is moderately susceptible to Fusarium head blight. The variety has a juvenile growth habit that is erect. Plant color at boot stage is green. Flag leaf at boot stage is recurved and twisted. Head shape is tapering and awned. Test weight and protein are average, with acceptable baking qualities. The certified classes of seed shall be Foundation, Registered and Certified. SY Rustler is protected under the Plant Variety Protection Act with the Title V certification option.

HARD RED WINTER WHEAT

AP503 CL2-AP503 CL2 is a hard red winter wheat bred and developed by AgriPro Wheat. It contains Als-1(653) and Als-3(653) genes conferring tolerance to the BASF herbicides 'Beyond' or 'ClearMax'. It is most similar to the variety 'Jagalene', which is one of the parents in the cross. Juvenile growth habit is semi-erect. Plant color at boot stage is blue green. Auricle anthocyanin and auricle hairs are present. Flag leaf at boot stage is erect and twisted. Waxy bloom is present on the head, stem and flag leaf sheath. Anther color is yellow. Head shape is strap and awned. Glumes are glabrous, narrow in width and long in length with oblique shoulders and acuminate beaks. Seed shape is ovate. Brush hairs are medium in size. Seed crease depth is shallow and width is narrow. Seed cheeks are rounded. AP503 CL2 has medium maturity with white chaff color. It is a semi-dwarf with excellent straw strength. It is moderately resistant to stem rust and moderately susceptible to stripe rust. AP503 CL is susceptible to leaf rust. Its winterhardiness levels have been intermediate, similar to Jagalene. In the more northern areas, it is recommended for stubble planting only. Agripro Wheat maintains seed stock and certified classes of foundation, registered and certified. AP503 CL2 is protected under the U.S. Plant Variety Protection Act with the Title V certification option.

EXPEDITION—Expedition hard red winter wheat was developed by the South Dakota Agricultural Experiment Station (SD AES) and released for seed increase in the fall of 2002. The official release date is March 1, 2003. The line was tested as SD97457 and was selected from the cross Tomahawk/Bennett. Expedition is an awned, white-chaffed, early maturing, semi-dwarf hard red winter wheat. Expedition is early maturing similar to Jagger, and two days earlier than Wesley. Plant height is short, similar to Alliance and approximately three inches shorter than Harding. Winter hardiness is rated good-excellent similar to Harding. Coleoptile length is similar to Wesley, greater than Alliance but less than Nekota and Harding. Straw strength is rated fair similar to Arapahoe. Test weight is slightly better than Wesley, Harding and Alliance but lower than Nekota and Crimson. Expedition is rated resistant to prevalent races of stem rust, however, it is susceptible to leaf rust, stripe rust and Wheat Streak Mosaic Virus. Expedition exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated good. Recognized seed classes are Breeder, Foundation, Registered and Certified. Expedition is protected under the Plant Variety Protection Act with the Title V certification option.

IDEAL - Ideal hard red winter wheat was developed by the South Dakota Agricultural Experiment Station (SD AES) and released in 32

2011 to seed producers by the developing institution. The line was tested as SD05118-1 and has the pedigree Wesley/NE93613. Ideal is white chaffed, awned, semi-dwarf wheat about 2 to 3 inches taller than Wesley. Ideal is a mid-maturity type, with maturity being about 2 days later than Wesley. Winter hardiness and resistance to lodging are also similar to Wesley. Ideal is moderately resistant to stem rust, leaf rust and tan spot. The variety is susceptible to stripe rust, BYDV and WSMV. Ideal exhibits excellent tolerance to acid soils and partial resistance to Hessian fly. Ideal has acceptable milling and good baking properties. Ideal is protected under the U.S. Plant Variety Protection Act with Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

KELDIN—Keldin is a hard red winter wheat released in 2013, and licensed to WestBred. The variety was tested as ACS 55017. Keldin is awned and white-chaffed at maturity. It is similar in height to Ideal. It has medium-late maturity, similar to Ideal. The variety has excellent winter hardiness. Keldin has very good straw strength. Test weight and protein are average. Keldin is moderately resistant to stripe rust, leaf rust and powdery mildew. Keldin is protected under the Plant Variety Protection Act with the Title V certification option.

LCS MINT—LCS Mint hard red winter wheat was developed by Colorado State University wheat breeding program. The experimental line was tested as CO050175-1 and resulted from the cross Overley/CO980829. LCS Mint was released in 2012 and is exclusively marketed by Limagrain Cereal Seeds. LCS Mint is white-chaffed, awned, semi-dwarf wheat. The variety is medium in height and maturity (similar to Expedition for heading date). LCS Mint has a striking dark green color. LCS Mint has good winter hardiness and lodging resistance. LCS Mint is moderately resistant to leaf rust and WSMV. The variety is moderately susceptible to stripe rust and stem rust. LCS Mint has excellent baking qualities and good test weight. The certified classes of seed shall be Foundation, Registered and Certified. LCS Mint is protected under the Plant Variety Protection Act with the Title V certification option.

LYMAN—Lyman hard red winter wheat was developed by the South Dakota Agricultural Experiment Station (SD AES) and released in 2008 to seed producers by the developing institution. The line was tested as SD00111-9 and resulted from the cross KS93U134/Arapahoe. Lyman is white chaffed, awned, semi-dwarf wheat. The variety is similar to Arapahoe in maturity (medium), height (medium) and winter hardiness, but has slightly less straw strength. Lyman is resistant to stem rust, and has the best scab resistance of any variety tested in the North Central Region. It is moderately resistant to leaf rust. Lyman is susceptible to stripe rust and wheat streak mosaic virus. In 2007 CPT trials, Lyman was first in grain yield and test weight. Lyman has excellent milling and acceptable baking properties. Lyman is protected under the Plant Variety Protection Act with the Title V certification option. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

OAHE—Oahe hard red winter wheat was developed by the South Dakota Agricultural Experiment Station (SD AES) and released in 2016 to seed producers by the developing institution. The line was tested as SD10257-2 and has the pedigree Ransom/SD96240-3-1. Oahe is white chaffed, awned, semi-dwarf wheat about 1 inch taller than Overland. Oahe is a mid-maturity type, with maturity being about 2 days later than Expedition. Winter hardiness and resistance to lodging are similar to Ideal. Oahe is moderately resistant to leaf rust, stripe rust, WSMV and Fusarium head blight. The variety is moderately susceptible to stem rust. Oahe has good test weight, average protein and baking properties. Application for Plant Variety Protection with the Title V certification option is anticipated. A royalty fee will be collected on all sales of Registered and Certified classes for seed purposes.

OVERLAND - Overland hard red winter wheat was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS and released in 2007 by the developing institutions and the South Dakota Agricultural Experiment Station. The line tested as NE01643 was selected from the cross Millennium sib//Seward/Archer. Overland is white chaffed, awned, tall semi-dwarf wheat. Overland matures about three days later than Wesley. Overland has good straw strength, similar to Wesley, and is shorter than Millennium by about a 1 cm. It is moderately resistant to leaf rust, stem rust. Fusarium head blight and Hessian fly. Overland is moderately susceptible to wheat streak mosaic virus and is susceptible to stripe rust. Overland has a medium coleoptile similar to Nekota. Winter hardiness for Overland is good, similar to Nekota. Test weight of Overland is good, similar to Expedition. Overland has adequate milling and baking properties. Overland is protected under the Plant Variety Protection Act with the Title V certification option. There is no saleable registered class.

SY 517 CL2-SY 517 CL2 is a hard red winter wheat bred and developed by Syngenta Participations AG. It contains two genes conferring tolerance to the BASF herbicides 'Beyond' or 'ClearMax'. It was tested as 07CL039-7. SY 517 CL2 is best adapted to Kansas, Nebraska and South Dakota. Juvenile growth habit is erect. Leaf color at boot stage is green. Auricle color is white and anthocyanin is absent. Flag leaf at boot stage is recurved, twisted and wax is present. Anther color is yellow. Head shape is tapering and awned. Glumes are narrow in width and medium in length with oblique shoulders and acuminate beaks. Seed shape is ovate. Brush hairs are short in size. Seed cheeks are rounded. Chaff color is white when mature. SY 517 CL2 is a semi-dwarf variety, with early maturity and excellent straw strength. It is moderately resistant to leaf rust and is moderately susceptible to stripe rust. The variety shows tolerance to SBMV. Syngenta Seeds, Inc. maintains seed stock and certified classes of Foundation, Registered and Certified. Certified seed stocks of SY 517 CL2 will likely be available in the fall of 2017. Plant Variety Protection is anticipated and SY 517 CL2 may only be sold as a class of certified seed.

SY MONUMENT-SY Monument is a hard red winter wheat bred and developed by Syngenta Seeds, Inc.- AgriPro and released in 2014. SY Monument was tested as 04BC574-2. The variety resulted from a cross made in 2003 by Syngenta Seeds, Inc. SY Monument is a semi dwarf variety that has white chaff at maturity. SY Monument is best adapted to the winter wheat growing areas of the High Plains. SY Monument has early maturity and average straw strength. Juvenile growth habit is erect. Leaf color at boot stage is green. Flag leaf at boot stage is waxy, non-twisted and erect. Anther color is yellow. Head shape is tapering, mid-dense and awned. Glume pubescence is absent. Shoulders are oblique and the beak shape is acuminate. Seed shape is ovate. Seed cheeks are rounded. SY Monument is moderately resistant to leaf rust and stripe rust. The variety is resistant to stem rust and WSMV. Syngenta-AgriPro maintains Breeders seed stock and certified classes of Foundation, Registered and Certified. SY Monument is protected under the Plant Variety Protection Act with the Title V Certification option.

SY SUNRISE-SY Sunrise is a hard red winter wheat bred and developed by Syngenta Seeds, Inc. - AgriPro and released in 2015. SY Sunrise was tested as 06BC796-68. SY Sunrise is a standard height semi dwarf variety that has white chaff at maturity. SY Sunrise is best adapted to the winter wheat growing areas of the Central Plains. SY Sunrise has early maturity, similar to SY Monument. Juvenile growth habit is erect. Leaf color at boot stage is green. Flag leaf at boot stage is non-waxy, twisted and erect. Anther color is yellow. Head shape is tapering, lax and awned. Glume pubescence is absent. Shoulders are oblique and the beak shape is acuminate. Seed shape is ovate. Seed cheeks are rounded. SY Sunrise is resistant to stem rust and is moderately susceptible to WSMV. It is moderately resistant to leaf rust and stripe rust. Syngenta-AgriPro maintains Breeders seed stock and certified classes of Foundation, Registered and Certified. SY Sunrise is protected under the Plant Variety Protection Act with the Title V Certification option.

SY WOLF—SY Wolf is a hard red winter wheat bred and developed by Syngenta Seeds, Inc. – AgriPro and released in 2011. SY Wolf was tested as BC01007-7. The variety resulted from the cross W99-331/97x0906-8 made in the spring of 2001 by Syngenta Seeds, Inc. SY Wolf is a semi dwarf variety that has white chaff at maturity. SY Wolf is best adapted to North and South Dakota and Western Nebraska. SY Wolf has early maturity and excellent straw strength. The variety is moderately resistant to leaf rust, tan spot, stem rust and WSMV. SY Wolf is also moderately resistant to powdery mildew and septoria. The variety is susceptible to stripe rust. Syngenta-AgriPro maintains Breeders seed stock and certified classes of Foundation, Registered and Certified. SY Wolf is protected under the Plant Variety Protection Act with the Title V certification option.

WESLEY—Wesley hard red winter wheat was developed by the USDA/ARS winter wheat researchers and released cooperatively by University of Nebraska Agriculture Experiment Station. The line was tested as NE95L158 and resulted from the cross KS831936-3//Colt/Cody. Wesley is resistant to stem rust, and moderately susceptible to leaf rust. Wesley has good resistance to leaf spotting diseases. The variety is susceptible to wheat streak mosaic virus, stripe rust and Fusarium Head Blight. Wesley is similar to Lyman in maturity (early) and is shorter in height. Test weight is below average and protein content is above average. Winter hardiness is rated as being average. Coleoptile length is rated short. Wesley will not have a salable Registered class and will be handled similar to Overland in this regard.

WEIGHTS AND MEASURES

Linear Measure (Length)

1 Mile = 5,280 feet or 320 rods

1 Rod = 161/2 feet

Square Measure (Area)

1 Acre = 160 square rods or 43,560 square feet

1 Square Rod = 301/4 sq. yds.

1 Square Yard = 9 sq. feet

Weight

1 Pound = 16 ounces

1 Long Ton = 2,240 pounds (Great Britian)

1 Short Ton = 2,000 pounds (USA)

Cubic Measure (Area)

1 Cubic Yard = 27 cubic feet

1 Cubic Foot = 1,728 cubic inches

TEMPERATURE CONVERSIONS

To convert Centigrade to Fahrenheit:

$$^{\circ}\frac{\text{C 5 9}}{5} + 32 = ^{\circ}\text{F}$$

To convert Fahrenheit to Centigrade:

$$(^{\circ}F - 32) 5 \frac{5}{9} = ^{\circ}C$$

DETERMINING PLANT POPULATION

Row length to equal 1/1000th acre

Row Width	Row width
in inches	1/1000 th acre
7″	74′8″
10″	52′3″
14″	37′4″
15″	34′10″
20"	26′2″
24"	21′9″
28"	18′8″
30″	17′5″
32″	16′4″
36″	14′6″
38″	13′9″
40″	13′1″

Metric Equivalents (Linear Measure)

1 Mile = 1.6093 kilometers

1 Kilometer = 0.62137 mile

1 Rod = 0.5029 decameter

1 Decameter = 1.9884 rods

1 Meter = 39.37 inches or 1.0936 yds.

Meter Equivalents (Square Measure)

1 Acre = 0.04047 hectare

1 Hectare = 2.471 acres

1 Square Rod = 0.2529 acre

1 Acre = 8.594 square rods

1 Square Yard = 0.8361

square meter

Metric Equivalents (Volume)

1 Bushel = 0.3524 hectoliter

1 Hectoliter = 2.8375 bushels

1 Quart dry = 1.101 liters

1 Quart liquid = 0.9463 liters

1 liter = 0.908 quart dry

1 liter = 1.0567 quarts liquid

Metric Equivalents (Weight)

1 Pound = 0.4536 kilogram

1 Kilogram = 2.2046 pounds

1 Metric Ton = 2,204.6 pounds

Volume Conversion Factors/ Area Conversion Factors

Cubic ft. 5 0.8 = bushels grain Cubic ft. 5 7.48 = gallons Cubic ft. 5 62.4 = pounds water Gallons 5 8.330 = pounds water Gallons 5 0.1337 = cubic ft. Cubic inches \div 1,728 = cubic ft. Cubic yard 5 27 = cubic ft. Cubic ft. \div 27 = cubic yards

GROWING DEGREE DAY EQUATION

GDD = Daily Max. Temp.* +
$$\frac{\text{Daily Min. Temp.} + -50^{\circ}}{2}$$

- *: Up to a maximum of 86°F
- †: Not below 50°F
